Summary

Full-stack software engineer with 2.5 years of production experience in TypeScript, Go, Node.js, React, Next.js, and PostgreSQL. Own the backend of a fleet-telematics platform tracking 50,000+ live vehicles at 404Minds, and independently built and launched two SaaS products: a healthcare payments platform and an AI-powered interview preparation platform.

Experience

404Minds Technologies | *Software Developer*

May 2024 – Present | Remote

- Own the backend, data pipeline, and deployments of a fleet-telematics platform tracking 50,000+ live vehicles: NestJS and Go microservices over gRPC, with ScyllaDB, PostgreSQL, and Redis.
- Ended deployment outages of 9 to 17 minutes: found Nginx routing to dead containers after each release and fixed it with per-request upstream resolution and start-first rollouts (Docker, Ansible).
- Rebuilt trip detection as one deterministic rule for every GPS tracker model after production data showed 22% of the distance driven by one fleet was missing from its trip reports.
- Fixed ScyllaDB reads that failed outright for any fleet above 100 vehicles, restoring fleet-wide trip, event, and fuel views, and removed a goroutine leak from the real-time tracking stream.
- Wrote Go parsers for three GPS tracker protocol families (Queclink, Aquila OBD-II, IntelliTrac) in the TCP receiver that ingests device data for the platform.
- Built the live fleet map in React and TypeScript with Google Maps marker clustering; merged 875 pull requests and reviewed 170 across 7 production repositories.

Projects

Healthcare Payments SaaS Platform | *Sole Engineer*

Apr 2026 – Present | Next.js, React, TypeScript, PostgreSQL, Prisma, Stripe

- Designed, built, and launched the whole product alone: patient, provider, and admin portals.
- Built payments that stay correct under failure: Stripe subscriptions, card and ACH payments, and provider payouts are recorded in a double-entry ledger, and a failed payout is reversed automatically.
- Isolated each customer account with PostgreSQL row-level security, verified and de-duplicated every Stripe webhook, and backed releases with 2,700+ unit tests and 249 end-to-end tests.

AI-Powered Interview Preparation Platform | *Primary Engineer*

Jun 2024 – Oct 2025 | Next.js, TypeScript, PostgreSQL, Prisma, OpenAI API, Stripe

- Built the core product: spoken mock interviews with an AI voice agent, an in-browser code editor for coding rounds, and personalized feedback generated with the OpenAI API.
- Built the practice question bank and progress tracking: coding, multiple-choice, and open-ended problems filterable by company and topic, with scored submission history (Prisma, PostgreSQL, REST API routes).
- Turned it into a paid product with Stripe subscriptions and free trials, user authentication, and an SEO blog and newsletter; wrote 152 of the 204 merged pull requests.

Technical Skills

Languages: TypeScript, JavaScript, Go (Golang), SQL, HTML, CSS

Backend: Node.js, NestJS, gRPC, REST APIs, WebSockets, Stripe API

Frontend: React, Next.js, Tailwind CSS

Databases: PostgreSQL, ScyllaDB, Redis, Prisma ORM

DevOps and Testing: Docker, Ansible, Nginx, AWS, Vercel, Git, Jest, Vitest, Playwright

Education

Veer Surendra Sai University of Technology (VSSUT)

B.Tech, Electronics and Telecommunication Engineering | 2019 – 2023 | CGPA: 8.37

Vikash Residential School, Bargarh

CBSE, Intermediate | 2017 – 2019 | Percentage: 90.4%
